1. Non-thesis Master's BELC Program Assessment Plan	27

The Department of Animal and Food Sciences has six graduate degree offerings:

Non-Thesis Master of Science (M.S.) Degrees

1. Food Science: Business and Entrepreneurial Leadership Concentration (BELC),
2. Animal Science: Business and Entrepreneurial Leadership Concentration (BELC),
3. Animal Science: Veterinary Biosciences, Biotechnology and One Health Concentration (VBBOH)

Thesis-Based Degrees

4. The Master of Science (M.S.) Degree in Animal Science,
5. The M.S. Degree in Food Science,
6. The Doctor of Philosophy (Ph.D.) Degree in Animal and Food Sciences.

The Non-thesis M.S. Degrees are primarily graduate-level course-based degrees, coupled with a research or problem solving project, but does not require a research thesis. The Non-thesis M.S. requires specific courses, as detailed in section II, below. The thesis-based M.S. and Ph.D. degrees are earned through an academic research program requiring the completion of an approved thesis or dissertation, respectively. For the Thesis/Dissertation-requiring degrees, the academic program will be developed jointly by the student and the advisor, with approval of the student's graduate committee. Other than the core course requirements (see below), there are no specifically-required graduate courses for the thesis/dissertation-requiring M.S. or Ph.D. degrees.

I. Admission Requirements for Non-Thesis MS Degrees

A. General Admission Requirements

Applicants must submit all materials directly to the Graduate College using the online admission process before admission can be considered. Admission applications are available at: <https://grad-admission.udel.edu/apply/>

On a 4.0 system, a G.P.A. of at least 3.0 is preferred. Applications will be evaluated based on a combination of record of academic or professional achievements, 3 letters of recommendations, and a personal statement describing how the completion of the Non-Thesis MS degree will contribute to their professional goals. The Graduate Record Examination (GRE) is optional. If included in the application, a combined score (quantitative + verbal sections) of 300 on a scale of 340 on the general exam is desirable. Students for whom English is not their first language, the minimum scores on the TOEFL and/or IELTS are based on the University of Delaware graduate admission requirements

(<https://www.udel.edu/academics/colleges/grad/prospective-students/grad-admissions/test-scores/>).

Admission to the Non-Thesis MS degree programs is based on selections made by the department Graduate Advisory Committee in compliance with University policies and procedures. Admission is selective and competitive and based on the number of well-qualified applicants, the number of available faculty to serve as mentors, and facilities. Those who meet stated minimum academic requirements are not guaranteed admission, nor are those who fail to meet those requirements necessarily precluded from admission, if they offer other appropriate strengths and/or experience.

B. Academic Preparation Requirements

A Bachelor's degree from an accredited program is required for admission, preferably from a science-based curriculum (e.g., but not limited to, Animal Science, Food Science, Biology, Nutrition, Physiology, Genetics, Microbiology, Chemistry, Biochemistry, or another appropriate discipline).

C. Application Deadlines

Applications will be taken on a continuing basis to allow for admittance in either the Fall, Spring, or Summer Semesters. The deadlines for each semester are given below. Note: International applicant deadlines precede Domestic, US citizen applicants, due to additional timing requirements for obtaining an appropriate student visa.

- Fall:** June 1 (International applicants)
August 1 (Domestic applicants, US citizens)
- Spring:** December 15 (International applicants)
January 15 (Domestic applicants, US citizens)
- Summer:** April 1 (International applicants)
May 1 (Domestic applicants, US citizens)

D. Types of Admission

1. **Regular Admission:** Regular admission is offered to students who meet all of the established entrance requirements.
2. **Conditional Admission:** Successful applicants are typically admitted conditionally because stated information is self-reported and uploaded documents are unofficial. Fulfilling the conditions stated on an offer of conditional admission by the first date of graduate coursework is critical, so the instructions stated on the letter must be followed carefully. Failure to clear all stated conditions by the start of graduate coursework may result in revocation of admission to the graduate program.

II. Degree Requirements for Non-Thesis MS Degrees

A. Non-Thesis M.S. Degree in Animal Science or Food Science: Business and Entrepreneurial Leadership Concentration

1. Learning Goals

Students completing the Non-Thesis MS degree in Animal Science with a Concentration in Business and Entrepreneurial Leadership will:

1. Demonstrate functional knowledge and skills in animal science by proposing solutions to common challenges in animal science.
2. Apply knowledge and skills in leadership, organization, project management, ethics, and entrepreneurship to identify and solve relevant challenges in animal science.
3. Design and execute a problem-solving project related to a current issue in animal science.

Students completing the Non-Thesis MS degree in Food Science with a Concentration in Business and Entrepreneurial Leadership will:

1. Demonstrate functional knowledge and skills in animal science by proposing solutions to common challenges in food science.
2. Apply knowledge and skills in leadership, organization, project management, ethics, and entrepreneurship to identify and solve relevant challenges in food science.
3. Design and execute a problem-solving project related to a current issue in food science.

2. Degree Requirements

The Non-Thesis MS degree with a Concentration in Business and Entrepreneurial Leadership is intended for applicants who want to further their academic training in animal or food science, but who are not research-oriented, but may be seeking a management position in an animal or food science career. This degree requires satisfactory completion of 30 hours of graduate-level coursework, including a Problem Solving Project, as described below.

3. Course Requirements

A total of 30 credit hours is required, including the Animal and Food Science Core (18 cr.), an Ethics course (3 cr.), a Problem Solving Project (3 cr.), and PLUS courses (6 cr.).

a. Animal or Food Science Core (18 cr. hrs.)

A total of 18 credit hours of graduate-level courses, of which 12 credit hours must be ANFS courses with a focus on animal science OR food science. .

b. Ethics Course (3 cr.) Select one course.

UAPP 650 - Values and Ethics of Leadership (3 cr.)

BUAD 640 - Ethical Issues in Domestic and Global Business Environments (3 cr.)

c. Problem Solving Project (3 cr.)

ANFS (or corresponding department code if supervised by a faculty member in a different department) 666 (3 cr.) - The degree candidate will conduct a faculty-mentored problem-solving project. The faculty mentor can be the student's advisor or another faculty member from inside or outside of the department. This project may be an action program, the development of a plan to address a pertinent problem, the development of materials or methodology suited to the student's situation, or the development and execution of research appropriate to the profession. This course will require both written and practical evaluation as determined by the faculty mentor.

d. PLUS courses (6 cr.) Select any two courses listed below.

i. Leadership and Organization

BUAD 670 - Managing People, Teams, and Organizations (3 cr.)

BUAD 678 - Leading Across Boundaries (3 cr.)

UAPP 604 - Leadership in Organizations (3 cr.)

UAPP 697 - Leading Organizations in Public & NP Sectors (3 cr.)

ii. Project Management, Operations, or Entrepreneurship

ENTR 616 – Applied Creativity (3 cr.)

ENTR 658 – Application Development for New Technology (3 cr.)

ENTR 660 - High Technology Entrepreneurship (3 cr.)

MISY 640 - Project Management and Costing (3 cr.)

UAPP 689 - Information Technology & Management of Public & NP Orgs (3 cr.)

UAPP 684 - Performance Management and Program Evaluation (3 cr.)

iii. Statistics (3 cr.)

STAT 608 -Statistical Research Methods (3 cr.)

BISC 643 - Biological Data Analysis (3 cr.)

STAT 656 - Biostatistics (3 cr.)

4. Advising Requirement

Students accepted into the Non-Thesis MS degree with a Concentration in Business and Entrepreneurial Leadership will be assigned an advisor. The student has the responsibility to meet with their advisor to plan their course of study and project in the program. The advisor will provide feedback on course selection based on interests and undergraduate/graduate background.

B. Non-thesis MS Degree in Animal Science: Veterinary Biosciences, Biotechnology, and One Health (VBBOH) Concentration

1. Learning Goals

Students completing the VBBOH non-thesis concentration will:

1. Demonstrate functional knowledge and skills in host-pathogen interactions, nutrition, and immunology.

2. Apply technical training in cell and molecular biology techniques in research, diagnostic, and clinical applications relevant to animal science.
3. Demonstrate understanding of scientific methodology, experimental design, and data analysis through successful completion of an individual research experience.

2. Degree Requirements

The Veterinary Biosciences, Biotechnology, and One Health non-thesis M.S. concentration is intended for applicants who want to further their academic training and desire additional hands-on training and research experience. Alternatively, they may come from an industry background and want to increase their skills and professional knowledge, while not being able to commit to a full-time, thesis-requiring graduate program. This non-thesis degree requires satisfactory completion of a minimum of 30 hours of graduate-level coursework as described below.

3. Course Requirements

Course requirements for each of the required areas are listed in each section below. Courses are subject to additions should appropriate courses become available. Any course substitutions must be approved by the ANFS Graduate Program Director and Faculty Advisor.

A. Host-Pathogen Core (9 cr. hrs.)

Essential to an understanding of the concept of One Health is knowledge of host-pathogen interactions in the context of their environment. The Host-Pathogen Interactions Core is a total of 9 credit hours of graduate-level courses, of which 3 cr. hrs. must be from an ANFS course. Courses meeting these requirements are given, below:

College	Department	Course #	Course Title
CANR	ANFS	635	Animal Virology
CANR	ANFS	639	Food Microbiology
CANR	ANFS	640	Comparative Histopathology
CANR	ANFS	648	Current Topics in One Health
CANR	ENWC	611	Insect Pest Management
CAS	BISC	625	Cancer Biology
CAS	BISC	682	Bacterial Pathogenesis

B. Nutrition and Immunology Core (6 cr. hrs.)

Essential for an understanding of the concept of One Health is knowledge of how nutrition informs and shapes host immune processes. This core is composed of 6 cr. hrs. of graduate-level courses, 3 cr. hrs. of which must be from ANFS. Courses meeting these requirements are given, below:

College	Department	Course #	Course Title
CANR	ANFS	624	Monogastric Nutrition
CANR	ANFS	636	Immunology of Domestic Animals
CANR	ANFS	654	Advanced Ruminant Nutrition
CANR	ANFS	655	The Gut Microbiome
CANR	ANFS	675	Veterinary Biochemistry
CAS	NSCI	640	The Immune System & Behavior

C. Technical and Practical Training (9 cr. hrs.)

This core requires the acquiring of real-world, hands-on skills for accomplishing research tasks. The Technical and Practical Training Core is a total of a minimum of 9 credit hours of graduate-level courses, of which 3 cr. hrs. must be from an ANFS course. Courses providing these skills are given in the table, below:

College	Department	Course #	Course Title
CANR	ANFS	644	Bioinformatics
CANR	ANFS	650	Applied Biomedical Communications
CANR	ANFS	671	Paradigms in Cell Signaling
CANR	APEC	603	Simulation Model. & Analysis
CAS	BISC	816	Systems Biology of Cells...
COE	BINF	644	Bioinformatics
COE	BINF	650	Protein Modifications
COE	BINF	694	Systems Biology I
CAS	CHEM	627	Practical Mass Spectrometry
CAS	CHEM	645	Protein Structure and Function
CAS	CHEM	646	DNA-Protein Interactions
CENG	BMEG	679	Introduction to Medical Imaging Systems
HESC	MMSC	603	Research Design
HESC	MMSC	608	Molecular Prep. Techniques
HESC	MMSC	625	Basic Molecular Techniques
HESC	MMSC	626	Protein Purification and Characterization
HESC	MMSC	627	Flow Cytometry
HESC	MMSC	635	Practical Genomics, Proteomics & Bioinformatics
HESC	MMSC	651	Cell and Tissue Culture Techniques
HESC	MMSC	691	Human Molecular Diagnostics
HESC	MMSC	692	Application of Molecular Diagnostic Techniques

D. Research Training and Data Analysis (3 cr. hrs.)

This core requires the learning of approaches to statistical analysis of biologically-derived data. Courses providing these skills are given in the table:

College	Department	Course #	Course Title
CANR	STAT	608	Research Methods
CAS	BISC	643	Biological Data Analysis
CANR	STAT	656	Biostatistics

E. Individual Research Experience (3 cr hrs, in ANFS 668)

The degree candidate will conduct a faculty-mentored research project. The faculty research mentor can be the student’s advisor or another department faculty member. This experience is designed to provide a real-world application of the techniques and concepts developed during the course work. This course will require both written and practical evaluation as determined by the research mentor.

4. Advising Requirement

Students accepted into the Non-Thesis MS degree with a concentration in Veterinary Biosciences, Biotechnology and One Health concentration will be assigned an advisor. The student has the responsibility to meet with their advisor to plan their course of study and schedule their research experience in the program. Advice will be given concerning course selection based on interests and undergraduate/graduate background.

III. Additional Policies for Non-Thesis MS Degrees

A. Transfer Credits

With approval of the Chair who renders a decision after consultation with the Graduate Advisory Committee and relevant faculty, and if necessary, in consultation with the department that offers the (potentially) equivalent course, up to 9 credits may be recommended to the Graduate College to be transferred to apply to the degree provided that the credits have not been applied to obtain a different degree.

Transfer of Graduate Credit Earned at another University (Official Transcript Required)

- Credits used to complete other degrees may not be transferred into a degree at UD.
- Maximum of 9 credits earned at another U.S. institution may be applied to a graduate degree if not used to complete a previous degree.

- Grade must be “B” or better to be acceptable for transfer. Course completion date must be no older than 5 years.
- Credits but no grades or quality points will transfer.
- Credits from institutions outside the United States are not transferable to the University of Delaware unless permission to transfer is given by Graduate College.

B. Degree Progress

1. Academic load and progress

The Non-Thesis MS degrees will follow the University of Delaware, Graduate College recommended policy for determining students’ failure to make satisfactory progress towards degree requirements and time limits for completion. Students may be enrolled on a full-time (9 credits per term) or part-time (fewer than 9 credits per term) basis.

2. Grade and GPA requirements

Students must have a minimum overall cumulative grade point average of 3.0 to be eligible for the degree. In addition, the grades in courses specifically required for the degree program must average at least 3.0. All graduate-numbered courses taken with graduate student classification at the University of Delaware are applied to the cumulative index. *Credit hours and courses for which the grade is below "C-" do not count toward the degree, even though the grade is applied to the index.*

3. Academic Probation

The Graduate College monitors the academic progress of all graduate students and notifies students in writing of all academic deficiencies. The cumulative GPA after each 9-hour increment determines academic standing. In addition to the University policy regarding minimum grade point averages, some departments require graduate students to maintain certain performance minima in their programs of study in all or in particular courses. Failure to meet the stated minima may lead to academic dismissal from the program.

C. Financial aid

There are no financial awards for this degree.

IV. Admission Requirements for Thesis-Requiring Degrees

A. All Applicants: An applicant for graduate study in Animal and Food Sciences must have appropriate academic training. Preparation for most areas of study should include general and organic chemistry, general biology, microbiology, biochemistry, and calculus. Applicants lacking preparatory course work will be required to complete the appropriate courses(s) prior to admission. A minimum cumulative grade point average of 2.75 (4 point scale), and a 3.00 average in the major is required of applicants holding the bachelor's degree. The Graduate Record Examination (GRE) is optional. If included in the application, a combined score (quantitative + verbal sections) of 300 on a scale of 340 on the general exam is desirable. Applicants must provide three letters of recommendation from former professors or supervisors, a completed Graduate Studies Application form, and a completed assistantship form (if applying for financial aid).

B. International Applicants: Students for whom English is not their first language, the required minimum scores on the TOEFL or IELTS are based on the University of Delaware graduate admission requirements (<https://www.udel.edu/academics/colleges/grad/prospective-students/grad-admissions/test-scores/>). Applicants may be requested to visit the department for a personal interview, or participate in a remote interview (Skype, Zoom or some other online platform), before a final decision concerning admission is made.

C. General: *In addition to the above conditions, admission to the graduate program is dependent upon availability of appropriate faculty expertise in the student's area of interest, advisor funding, as well as space in the laboratory of interest.*

Admission to the Graduate Program is performed by the Chair of the Graduate Committee in consultation with the Graduate Advisory Committee and the chosen advisor. Following admission to the University, a letter of offer is generated by the Department Chair detailing the admission status, advisor, and terms of the graduate contract.

V. General Degree Requirements for Thesis-Requiring Degrees

A. M.S. Degree in Animal Science and M.S. Degree in Food Science.

In the M.S. program in Animal Science, a student may specialize in animal nutrition, pathology, physiology, immunology, molecular biology, genomics, systems biology, management, or a combination of these disciplines (i.e., nutritional immunology, etc.).

In the M.S. program in Food Science, a student may specialize in food science, safety, microbiology or engineering.

1. Learning Goals.

Learning goals for the thesis-based MS in Animal Science

1. Students will demonstrate mastery of core concepts in the animal sciences and how their research fits into the broader framework of One Health and agricultural sciences.
2. Students will demonstrate critical thinking through use of primary literature and appropriate laboratory/computational tools to collect, analyze, and report their data and research results.
3. Students will demonstrate the ability to apply the scientific method by formulating hypotheses, designing relevant experiments, validating methodology, and critically evaluating and interpreting findings.
4. Students will demonstrate that they can write and graphically depict scientific data in a clear, organized, and accurate fashion tailored for a diverse range of audiences. Students will demonstrate the ability to orally communicate and defend ideas, concepts, and research findings. Students will develop personal and professional skills through networking, attendance at professional meetings, and seminar presentations.
5. Students will demonstrate the ability to work with others on a team and engage in mentoring of undergraduate students and peers through their research lab, teaching, and participation in the University community.

Learning goals for the thesis-based MS in Food Science

1. Students will demonstrate mastery of core concepts in the food sciences and how their research fits into the broader framework of One Health and agricultural sciences.
 2. Students will demonstrate critical thinking through use of primary literature and appropriate laboratory/computational tools to collect, analyze, and report their data and research results.
 3. Students will demonstrate the ability to apply the scientific method by formulating hypotheses, designing relevant experiments, validating methodology, and critically evaluating and interpreting findings.
 4. Students will demonstrate that they can write and graphically depict scientific data in a clear, organized, and accurate fashion tailored for a diverse range of audiences. Students will demonstrate the ability to orally communicate and defend ideas, concepts, and research findings. Students will develop personal and professional skills through networking, attendance at professional meetings, and seminar presentations.
 5. Students will demonstrate the ability to work with others on a team and engage in mentoring of undergraduate students and peers through their research lab, teaching, and participation in the University community.
2. **Time Limitation.** The programs are normally completed in 2 to 2 ½ years of full-time study. All requirements for the Master's degrees must be met within a maximum of 10 consecutive semesters.
3. **Credits.** A minimum of 30 graduate credit hours is required, of which 6 credits must be ANFS 869 Master's Thesis. A maximum of 3 credits of ANFS 668/868 Research or ANFS 666/866 Special Problem may be applied towards the MS degree. ANFS 666/866 that is taken as a titled course does not count toward this maximum. The student must have a minimum cumulative grade point average of 3.00 (4 point scale) in order to receive the M.S. degree.

4. **Core Courses.** All students pursuing the M.S. degree will complete the following core courses:
- ANFS 865 Seminar (1 cr.)
 - ANFS 869 Master's Thesis (6 cr.)
 - CHEM 527 Introductory Biochemistry (3 cr.) or CHEM 641 Biochemistry (3 cr.) or ANFS 670 Principles of Molecular Genetics (3 cr.) or ANFS 675 Veterinary Biochemistry (3 cr.) or an appropriate equivalent Biochemistry course as approved by the student's Graduate Committee
 - STAT 608 Statistical Research Methods (3 cr.) or STAT 615 Design and Analysis of Experiments (3 cr.) or BISC 643 Biological Data Analysis (3 cr.) or an equivalent statistics course as approved by the student's Graduate Committee.
4. **Elective Courses.** The remaining courses, totaling not less than 17 credit hours, will be determined by the student, faculty advisor and the Graduate Committee. These courses will vary among students depending on their specific needs to carry out their research and complete the program. Elective courses taken by students pursuing the M.S. in Animal Science include, but are not limited to, those with the ANFS, BINF, BISC, CHEM, and STAT designations. Elective courses taken by students pursuing the M.S. in Food Science include, but are not limited to, those with the ANFS, BINF, BISC, CHEM, STAT, CHEG, MATH, MEEG, PLSC, PHYS, and NTDT designations (see Graduate Course Offerings).
5. **Graduate Committee.** Each student will have a Graduate Committee consisting of at least three faculty or professional members nominated by the faculty advisor and approved by the Department Chairperson. The advisor, who serves as the chair of the committee, must be an ANFS faculty member. The Graduate Committee's responsibility is the evaluation of the student's program, thesis and examination. Participation of outside individuals from industry, government, or other academic departments on Graduate Committees may be required depending on the student's area of research and the availability of faculty expertise within the department. Departmental Adjunct Faculty and non-faculty Professional Staff shall be considered as outside members in their participation on Graduate Committees. However, not

more than half of the Graduate Committee members shall be considered as outside members. The Department Chairperson is considered an *ex officio* member of all Graduate Committees.

6. Research Proposal. A research topic shall be determined in conference between the faculty advisor and the student. The student will prepare a research proposal containing pertinent background material including a literature review, specific objectives of the research project, and methods to be used in the planned studies. It is suggested that the proposal be a minimum of 15 pages double spaced, using 12 point font. The proposal shall be submitted to the student's Graduate Committee for review and approval of the research project. A proposal review meeting shall be held prior to the completion of the first year following matriculation. The proposal shall be submitted to the committee members at least ten working days prior to the scheduled meeting. The student will give an oral presentation summarizing the proposal. The committee members will question the student to verify that the student understands the research problem and the experimental approaches needed to address it. The Committee will also ensure that the student has the proper training and resources to do the research. As a result of the proposal review meeting, the student may be required to revise the proposal and/or take additional relevant course work.

7. Thesis. A thesis reporting the objectives, procedures, results, and a discussion of the student's research shall be prepared according to the most recent edition of the *Thesis Manual* prepared by the Graduate College. Copies of the thesis shall be submitted to the student's Graduate Committee at least ten working days prior to the final examination. It is highly recommended that the student present his/her results at an appropriate scientific meeting and prepare a manuscript(s) based on his/her research results in a form suitable for publication. Published thesis research is acceptable as part of the thesis. At the discretion of the advisor, students may be required to provide a draft manuscript at the time of the defense.

8. Thesis Defense. Upon completion of the thesis, the student is required to give an oral presentation (seminar) summarizing the thesis research. Following questions from the public, the committee members will question the student about the thesis

and related subject areas to verify that the student fully understands the research findings and their implications. A favorable vote of at least two-thirds of the committee members is required for passing.

B. The Doctor of Philosophy (Ph.D.) Degree in Animal and Food Sciences.

The Doctor of Philosophy Degree has become the highest mark of achievement awarded for the demonstrated ability to investigate problems independently. Doctoral study devotes itself to developing the student's capacity to make significant contributions to knowledge through the development of a critical, disciplined mind. This training is best accomplished under the full-time student status in order to maximize the interaction of the student with a scientific group.

1. Learning Goals

1. Scientific competency
 1. Students will demonstrate mastery of broad content specific knowledge through analysis of literature, integration of their research into the context of previous work, and critical thinking about the broader implications of their work.
 2. Students will develop and use appropriate laboratory and computational tools to collect, analyze, and report their data and research results.
 3. Students will demonstrate the ability to apply the scientific method by formulating hypotheses, design relevant experiments, validate methodology, and critically evaluate and interpret findings appropriately.
 4. Students will produce a significant, novel research contribution to their discipline.
2. Oral, written, and graphical communication
 1. Students will demonstrate the ability to write and graphically depict scientific data in a clear, organized, and accurate fashion tailored for a diverse range of audiences.
 2. Students will demonstrate the ability to orally communicate and defend ideas, concepts, and research findings.
 3. Students will demonstrate proficiency in and awareness of appropriate software use for their discipline.
3. Ethics and habits of mind

1. Students will demonstrate an understanding of the importance of ethical practice in data collection, analysis, and reporting.
 2. Students will recognize and advocate for the role science plays in society as a whole.
 3. Students will demonstrate unbiased critical thinking, an openness to diverse ideas, professional empathy, and the ability to work with others on a team.
 4. Students will engage in mentoring of undergraduate students and peers through their research lab, teaching, and participation in the University community.
4. Professional Development
1. Students will develop personal and professional skills through networking, attendance at professional meetings, and seminar presentations.
 2. Students will participate in career exploration in academics, government, industry, and allied occupations

2. Admission. Students may enter the Ph.D. program after having previously earned a bachelor's degree (B.A. or B.S.), an M.S. degree, or a Doctorate in Veterinary Medicine (DVM), or equivalent. A student who has been admitted to the Ph.D. program in Animal and Food Sciences may begin working toward the degree. However, he/she has no official status as a doctoral candidate until he/she has passed the comprehensive examination.

3. Areas of Specialization. The Ph.D. degree in Animal and Food Sciences will be granted in the following major areas of specialization: animal nutrition, pathology, physiology, immunology, molecular biology, genomics, systems biology, management, food science, safety, microbiology or engineering, or a combination of these disciplines (i.e., nutritional immunology, etc.).

In addition to the major area of specialization, the student's advisor, in consultation with the Doctoral Committee, will determine whether the student should pursue a minor field of specialization. If a minor field of specialization is selected, the committee will judge the suitability of the field, relevance to the major area of specialization, and requirements for the minor.

4. Time Limitation. A maximum of 14 consecutive semesters beyond the bachelor's degree, or 10 consecutive semesters beyond the master's degree, is allowed to complete the requirements for the Ph.D. degree.

5. Core Courses and General Requirements.

All students pursuing the Ph.D. will complete the following core courses:

- ANFS 865 Seminar (1 cr.),
- ANFS 969 Doctoral Dissertation (9 cr.),
- CHEM 641 Biochemistry (3 cr.) or ANFS 675 Veterinary Biochemistry (3 cr.) or an equivalent metabolism-focused biochemistry course as approved by the student's Doctoral Committee,
- CHEM 642 Biochemistry (3 cr.) or ANFS 670 Principles of Molecular Genetics (3 cr.) or an equivalent nucleic acid-focused biochemistry course as approved by the student's Doctoral Committee,,
- Statistics course: STAT 608 Research Methods (3 cr.), STAT 615 Design and Analysis of Experiments (3 cr.), BISC 643 Biological Data Analysis (3 cr.), or an equivalent statistics course as approved by the student's Doctoral Committee..

Beyond the core courses, no specific number of courses completed or credits earned are uniformly required. The student and advisor, in concert with the Doctoral Committee, will select appropriate course work based on the student's background and major and minor (if applicable) area(s) of specialization for the Ph.D. Consideration will be given to the student's prior training and experience at the undergraduate (B.A. or B.S.) and M.S. and/or D.V.M. (if applicable) level(s). Students with more advanced training and experience will need fewer courses to complete their Ph.D. program. General requirements for the Ph.D. are based on a period of residency, writing of a satisfactory research proposal and dissertation, and passing the comprehensive examination and the final dissertation defense. The candidate's doctoral program will consist of a combination of Doctoral Committee approved formal courses, seminars, individual study, and research credits as needed by the student.

6. Residency Requirements. At least one continuous academic year (two semesters) must be devoted to full-time study as a registered student in the major field at the

University of Delaware. Full-time study consists of a minimum load of nine credit hours per semester.

7. Advisor and Doctoral Committee. Most applicants to the Ph.D. program identify a potential faculty advisor at the time of application. If that faculty member is unable (due to lack of space, funding, etc.) to advise the student, then another advisor who is acceptable to the student is sought. If an advisor cannot be identified, then the student is not admitted to the Ph.D. program. As a condition of admission into the program, a faculty member must agree to serve as the student's graduate advisor for the balance of the student's program. A student may change advisors but this is very rare (see Section IV.D., Evaluation of Graduate Student Progress). A Doctoral Committee will be appointed within six months following matriculation. The committee shall consist of not less than four and no more than six faculty or professional members nominated by the graduate advisor and approved by the Department Chairperson. Participation of outside individuals from industry, government or other academic departments on the Doctoral Committee may be required, depending on the student's area of research and the availability of faculty expertise within the department. Departmental Adjunct Faculty and non-faculty Professional Staff shall be considered as outside members in their participation on Doctoral Committees. At least one member of the committee shall be from outside the Department of Animal and Food Sciences. However, not more than half of the Doctoral Committee members shall be considered as outside members. The Department Chairperson is considered an *ex officio* member of all Graduate Committees. The committee is responsible for approving the student's course work and research program. The committee will prepare, administer, and evaluate the student's comprehensive and final examinations and will supervise and approve the dissertation. The student's faculty advisor serves as chair of the Doctoral Committee. A faculty member may serve as the graduate advisor for a student in both his/her M.S. and Ph.D. programs, although this is not common. Students who have completed the M.S. Degree in Animal Science or the M.S. Degree in Food Science are generally encouraged to pursue the Ph.D. at other universities.

8. Research Proposal. Advancement to degree candidacy requires successful oral defense of a research proposal. It is suggested that the proposal be a minimum of 15 pages double spaced, using 12 point font. The proposal will be submitted to the Doctoral Committee at least ten working days prior to the scheduled defense. The student will give an oral presentation summarizing the proposal. The committee members will question the student to verify that the student understands the research problem and the experimental approaches needed to address it. The committee will also ensure that the student has the proper training and resources to do the research. As a result of the meeting, the student may be required to revise the proposal and/or take additional course work. The research proposal defense should precede the comprehensive examination.

9. Comprehensive Examination.

Successful completion of the comprehensive examination is required of all Ph.D. students prior to their admission to candidacy. The examination normally is given to the student after completion of all course work and selection of a dissertation topic. The student is required to have a minimum grade point average of 3.0 (4 point scale) at the time of the examination.

Format of the Comprehensive Qualifying Examination

The Department of Animal and Food Sciences recognizes several formats for the Comprehensive Qualifying Examination. The particular format of the examination to be used is at the discretion of the major advisor.

Possible Formats

- a. **Research Proposal:** The written portion of the Qualifying Examination will be a research proposal following the formats of one of the following Government agencies: USDA (NIFA), NIH or NSF. The topic of the proposal must be outside the primary area of study of the graduate student and will be decided with the input and agreement of the Doctoral Committee. The student must follow all formatting and page restrictions of the chosen granting agency and must include references cited in an accepted bibliographical format, essentially generating the Project Description portion of the proposal, only. The student will have one

month to prepare the proposal, which must then be distributed to committee members at least 2 weeks prior to the presentation and defense of this proposal. The format of the defense will be a 30 – 45 min presentation, followed by a question and answer period that will initially focus on the proposal, but can be expanded to include other areas, as determined by the committee.

- b. **Combination Written and Oral Examination:** Each member of the student's Doctoral Committee will submit questions to the student via the advisor who will administer the written portion of the comprehensive examination. Following completion of the written exam, the advisor will return the student responses to the appropriate committee member for their evaluation. Students passing the written examination may continue for the oral portion of the comprehensive examination generally given within one month of the completion of the written examination. In the oral portion of the comprehensive examination the student must appear before all committee members and demonstrate competency in this forum.

- c. **Committee Examination:** Each member of the student's Doctoral Committee will individually administer either written or oral examinations in a particular area germane to the student's research project. Each committee member will then inform the student and major advisor of the outcome of their respective examination, in writing. Students passing a majority of the written/oral examinations may continue for the oral portion of the comprehensive examination before the full Doctoral Committee, which is generally given within one month of the completion of the individual examinations. As described above, in the oral portion of the comprehensive examination the student must appear before all committee members and demonstrate competency in this forum.

Comprehensive Examination Outcome

Following the question and answer period, the student will be excused and the committee will discuss the performance of the student and decide (by majority vote) on one of the following outcomes:

- | | | |
|----------------------------|----------|--|
| (1) Pass, unconditionally, | Outcome: | student admitted to doctoral candidacy |
| (2) Pass, conditionally, | Outcome: | student admitted to doctoral candidacy after meeting certain conditions (take an additional class, re-write passage of exam, etc.) |
| (3) Fail, conditionally, | Outcome: | student must re-take entire examination within three months |
| (4) Fail, unconditionally, | Outcome: | student dismissed from graduate or must complete current work for Master's degree |

The student will then be re-admitted to the room and told of the decision of the committee.

10. Dissertation. The ability to conduct independent research and competence in scholarly writing must be demonstrated by the preparation of a dissertation on the main topic of specialization in accordance with the regulations of the Graduate College. The contents and conclusions of the dissertation must be defended at the time of the final oral defense (see below) and approved by the Doctoral Committee. Copies of the dissertation must be provided to committee members at least ten working days before the date of the final oral examination. Preparation of a manuscript(s) for publication of the information contained within the dissertation is expected prior to, or within one month after, approval of the dissertation by the committee at the final oral examination.

11. Dissertation Defense. Upon recommendation of the Doctoral Committee, a final oral defense of the dissertation will be scheduled for the doctoral candidate who has satisfied all other requirements for the degree. The examination must be scheduled at

least two weeks prior to the time the examination is to be held. The examination, which is open to the public, shall be related in a large part to the dissertation, but it may cover the entire field of study of the candidate. The examination will be administered by the student's Doctoral Committee. The student will give an oral presentation (seminar) summarizing the dissertation research, followed by a period of public question and comment. The Committee members will then dismiss the public and question the student about the dissertation and related subject areas to verify that the candidate fully understands the research findings and their implications. A favorable vote of a majority of the members of the committee is required for passing. If the candidate fails, it is the responsibility of the Doctoral Committee to determine whether he/she may take another examination.

VI. Additional Graduate Policies, Procedures and Program Assessment

- A. Graduate Seminar** Enrollment in the graduate seminar is required of each graduate during his/her first semester in the department graduate program. Although formal enrollment is not required in subsequent semesters, attendance is required at all seminars each semester of the student's graduate program. A grade designation of "S" will be assigned at the end of the first semester and carried to the completion of the student's graduate program. At that time, a letter grade, based upon performance and participation of the student in seminars each semester of his/her program, will be assigned. Generally, seminar presentations will be made by outside speakers each fall semester, and graduate students will be responsible for presentations each spring semester.
- B. Graduate Assistantships and Fellowships** Students are nominated for assistantships based on the needs of the department and qualifications of the students. It is anticipated that not less than one-half of the students admitted will receive some type of financial support.
- C. Graduate Student Teaching** All graduate students, especially Ph.D. candidates, are expected to assist in the teaching of at least one course in the department (guest lectures, proctoring exams, grading, etc.).

D. Evaluation of Graduate Student Progress If a graduate student, his/her faculty advisor, a member(s) of his/her Graduate (Doctoral) Committee, or the Department Chairperson perceives that the graduate student is not making satisfactory progress toward his/her degree, an evaluation of the student's progress will be conducted by the Graduate Advisory Committee and Department Chairperson. If, in the opinion of the Graduate Advisory Committee, the student is not making satisfactory progress, the student and advisor will be notified and the Department Chairperson advised in writing of any actions the Graduate Advisory Committee feels necessary. The student and/or advisor will have the opportunity to meet with the Graduate Advisory Committee and/or Department Chairperson, as a group or on an individual basis, to discuss the Committee's actions. Possible outcomes of this action include reassignment of the student to another faculty advisor or termination of the student from his/her graduate program.

Termination of a graduate student from his/her program is rare. Conditions for termination may include any one of the following:

1. Failure to maintain a grade point average of 3.0 (4 point scale) throughout the student's program.
2. Failure to make adequate progress in the student's research required for the degree (see above), or as consequence of failing the comprehensive examination.
3. Unethical professional conduct (plagiarism, fabrication of data, sabotage of another's experiment, etc.).

Specific details on the University's conduct expectations of students are given in the section entitled, "Student Guide to University Policy" in the University of Delaware Official Student Handbook.

E. Graduate Program Assessment

1. Assessment Plan for Non-thesis Master's Program with a Concentration in Business, Entrepreneurship, and Leadership

Assessment plan for Non-thesis Master's Degree Concentrations in Animal or Food Science				
Objectives	Strategic Activities	Measures	Short-term Outcomes	Long-term Impact
1. Demonstrate functional knowledge and skills in animal/food science by proposing solutions to common challenges in animal/food science	Course work covering the disciplines of animal or food science	Faculty evaluation of student progress in coursework. Surveys of graduate students in the program and post-graduation	Students are prepared for subsequent coursework	Graduates enjoy long term success in animal and food science careers.
2. Apply knowledge and skills in leadership, organization, project management, ethics, and entrepreneurship to identify and solve relevant challenges in animal/food science	Coursework in ethics, communication, leadership, entrepreneurship, management, statistics, and other approved courses	Surveys of students focusing on their experiences in these classes. Surveys of graduates to determine the utility of these classes to their career. Faculty evaluation of student progress in coursework.	Course work for the NON-THESIS OPTION degree helped students secure initial employment Students and graduates report applying knowledge from courses to work settings	Acceptance to Professional and/or Graduate School. Graduates enjoy long term success in animal and food science careers
3. Design and execute a problem-solving project related to a current issue in animal/food science	Identify a problem and potential solution and design project to solve the problem.	Quality of the project study design and results. Faculty evaluation of quality and scope of the project.	Surveys of graduates to determine the utility of their project experience to their career.	Graduates enjoy long term success in animal and food science careers.
